

2918 siapan

The segmented belt for the solid wood material industry

The segmented belt for the solid wood material industry

The 2918 siapan, which has been specially designed for the solid wood material industry, offers top results as a segmented belt.

- ▶ Dust-free process: Antistatic construction minimises dust build-up on belt, workpiece and machinery
- ▶ High transverse belt stability
- ▶ High removal rate when working on softwood and hardwood with coarser grits
- ▶ Can be repeatedly clamped and unclamped on the machine
- ▶ Waterproof and washable
- ▶ Can be used as wide belt and segmented belt
- ▶ Perfect surfaces thanks to TopTec
- ▶ For continuous, very heavy-duty use, washable
- ▶ High tearing resistance

Product profile

Grit type:	Semi-friable aluminium oxide	
Grit range:	36-40; 60-120	
Backing:	Z-wt cloth, polyester	
Coating:	Electrostatic open	P036 – P060
	Closed	P080 – P120
Bonding:	Resin over resin	
Equipment:	TopTec	

Use

Applications

- Calibrating
- Intermediate sanding
- Fine sanding
- Keying of plywood, wood core plywood and solid wood panels
- Calibrating solid wood
- Calibrating solid wood
- Calibrating, coarse and intermediate sanding
- Coarse sanding in plywood manufacturing
- Coarse sanding of laminated solid wood panels
- Fine sanding of laminated solid wood panels

Materials

Hard wood; Soft wood; Resinous wood; Wooden base; Wooden base

Technology

TopTec
